UPGRADE YOUR TIMBER SLIDING FENDERS TO SUSTAINABLE HD-PE.

Why should you upgrade to HD-PE?

High-Density Polyethylene or ‘aka’ plastic lumber is a sustainable, low friction material, that is UV and ozone resistant and stays in shape for years to come without losing any strength. In sharp contrast to timber, HD-PE does not rot or split and is easily recyclable.

Switch now, and protect your marine assets for as long as possible!

Applications and sizes

Pile protection

Lock doors and entrances

Bridge protection

Car stopper

Available in heights from 50 mm up to 440 mm, widths from 50 mm up to 300 mm and single lengths up to 6,500 mm. Within this range, intermediate sizes/cross sections are available.
